

## SBML Model Report

**Model name: “Munz2009 - Zombie SIZRQ”**

May 6, 2016

### 1 General Overview

This is a document in SBML Level 2 Version 4 format. Table 1 gives an overview of the quantities of all components of this model.

Table 1: Number of components in this model, which are described in the following sections.

Element	Quantity	Element	Quantity
compartment types	0	compartments	1
species types	0	species	5
events	0	constraints	0
reactions	10	function definitions	0
global parameters	10	unit definitions	5
rules	1	initial assignments	1

### Model Notes

Munz2009 - Zombie SIZRQ

This is the model with latent infection and quarantine described in the article.

This model was originally created by libAntimony v1.4 (using libSBML 3.4.1).

This model is described in the article: [When zombies attack!: Mathematical modelling of an outbreak of zombie infection](#) P. Munz, I. Hudea, J. Imad and R.J. Smith?Infectious Disease Modelling Research Progress 2009, chapter 4, pp 133-150. Editors: Jean Michel Tchenche and C. Chiyaka; Nova Science Publishers, Inc., NY, USA.

Abstract:

Zombies are a popular figure in pop culture/entertainment and they are usually portrayed as being brought about through an outbreak or epidemic. Consequently, we model a zombie attack,

using biological assumptions based on popular zombie movies. We introduce a basic model for zombie infection, determine equilibria and their stability, and illustrate the outcome with numerical solutions. We then refine the model to introduce a latent period of zombification, whereby humans are infected, but not infectious, before becoming undead. We then modify the model to include the effects of possible quarantine or a cure. Finally, we examine the impact of regular, impulsive reductions in the number of zombies and derive conditions under which eradication can occur. We show that only quick, aggressive attacks can stave off the doomsday scenario: the collapse of society as zombies overtake us all.

This model is hosted on [BioModels Database](#) and identified by: [MODEL1008060002](#).

To cite BioModels Database, please use: [BioModels Database: An enhanced, curated and annotated resource for published quantitative kinetic models](#).

To the extent possible under law, all copyright and related or neighbouring rights to this encoded model have been dedicated to the public domain worldwide. Please refer to [CC0 Public Domain Dedication](#) for more information.

## 2 Unit Definitions

This is an overview of eight unit definitions of which three are predefined by SBML and not mentioned in the model.

### 2.1 Unit `substance`

**Name** individuals(thousands)

**Definition** kitem

### 2.2 Unit `time`

**Name** days

**Definition** 86400 s

### 2.3 Unit `perday`

**Name** per day

**Definition**  $(86400 \text{ s})^{-1}$

### 2.4 Unit `perdayperind`

**Name** per day per thousand individuals

**Definition**  $(86400 \text{ s})^{-1} \cdot \text{kitem}^{-1}$

## 2.5 Unit `indperday`

**Name** thousand individuals per day

**Definition**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

## 2.6 Unit `volume`

**Notes** Litre is the predefined SBML unit for volume.

**Definition** l

## 2.7 Unit `area`

**Notes** Square metre is the predefined SBML unit for area since SBML Level 2 Version 1.

**Definition** m<sup>2</sup>

## 2.8 Unit `length`

**Notes** Metre is the predefined SBML unit for length since SBML Level 2 Version 1.

**Definition** m

# 3 Compartment

This model contains one compartment.

Table 2: Properties of all compartments.

Id	Name	SBO	Spatial Dimensions	Size	Unit	Constant	Outside
env	environment		3	1	litre	<input checked="" type="checkbox"/>	

## 3.1 Compartment `env`

This is a three dimensional compartment with a constant size of one litre.

**Name** environment

## 4 Species

This model contains five species. Section 9 provides further details and the derived rates of change of each species.

Table 3: Properties of each species.

Id	Name	Compartment	Derived Unit	Constant	Boundary Condition
S	Susceptible	env	kitem	$\square$	$\square$
I	Infected	env	kitem	$\square$	$\square$
Z	Zombie	env	kitem	$\square$	$\square$
R	Removed	env	kitem	$\square$	$\square$
Q	Quarantined	env	kitem	$\square$	$\square$

## 5 Parameters

This model contains ten global parameters.

Table 4: Properties of each parameter.

Id	Name	SBO	Value	Unit	Constant
N	starting Population		500.000	kitem	✓
p			0.000	$(86400 \text{ s})^{-1} \cdot \text{kitem}$	☐
delta			$10^{-4}$	$(86400 \text{ s})^{-1}$	✓
beta			0.010	$(86400 \text{ s})^{-1} \cdot \text{kitem}^{-1}$	✓
kappa			$10^{-4}$	$(86400 \text{ s})^{-1}$	✓
sigma			$10^{-4}$	$(86400 \text{ s})^{-1}$	✓
gamma			$10^{-4}$	$(86400 \text{ s})^{-1}$	✓
rho			0.050	$(86400 \text{ s})^{-1}$	✓
zeta			$10^{-4}$	$(86400 \text{ s})^{-1}$	✓
alpha			0.005	$(86400 \text{ s})^{-1} \cdot \text{kitem}^{-1}$	✓

## 6 Initialassignment

This is an overview of one initialassignment.

### 6.1 Initialassignment S

**Derived unit** kitem

**Math** N

## 7 Rule

This is an overview of one rule.

### 7.1 Rule p

Rule p is an assignment rule for parameter p:

$$p = S \cdot \text{delta} \quad (1)$$

**Derived unit**  $\text{kitem} \cdot (86400 \text{ s})^{-1}$

## 8 Reactions

This model contains ten reactions. All reactions are listed in the following table and are subsequently described in detail. If a reaction is affected by a modifier, the identifier of this species is written above the reaction arrow.

Table 5: Overview of all reactions

Nº	Id	Name	Reaction Equation	SBO
1	birth		$\emptyset \longrightarrow S$	
2	death_healthy		$S \longrightarrow R$	
3	infection		$S \xrightarrow{Z} I$	
4	quarantine- _infected		$I \longrightarrow Q$	
5	quarantine- _zombies		$Z \longrightarrow Q$	
6	death- _quarantined		$Q \longrightarrow R$	
7	natural_death- _infected		$I \longrightarrow R$	
8	zombification- _infected		$I \longrightarrow Z$	
9	resurrection		$R \longrightarrow Z$	
10	destruction		$Z \xrightarrow{S} R$	

### 8.1 Reaction `birth`

This is an irreversible reaction of no reactant forming one product.

#### Reaction equation

#### Product

Table 6: Properties of each product.

Id	Name	SBO
S	Susceptible	

#### Kinetic Law

**Derived unit**  $(86400 \text{ s})^{-1} \cdot \text{kitem}$

$$v_1 = p \quad (3)$$

### 8.2 Reaction `death_healthy`

This is an irreversible reaction of one reactant forming one product.

#### Reaction equation

#### Reactant

Table 7: Properties of each reactant.

Id	Name	SBO
S	Susceptible	

#### Product

Table 8: Properties of each product.

Id	Name	SBO
R	Removed	

## Kinetic Law

**Derived unit**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

$$v_2 = \text{delta} \cdot S \quad (5)$$

## 8.3 Reaction infection

This is an irreversible reaction of one reactant forming one product influenced by one modifier.

### Reaction equation

### Reactant

Table 9: Properties of each reactant.

Id	Name	SBO
S	Susceptible	

### Modifier

Table 10: Properties of each modifier.

Id	Name	SBO
Z	Zombie	

### Product

Table 11: Properties of each product.

Id	Name	SBO
I	Infected	

## Kinetic Law

**Derived unit**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

$$v_3 = \text{beta} \cdot S \cdot Z \quad (7)$$

#### 8.4 Reaction `quarantine_infected`

This is an irreversible reaction of one reactant forming one product.

##### Reaction equation

##### Reactant

Table 12: Properties of each reactant.

Id	Name	SBO
I	Infected	

##### Product

Table 13: Properties of each product.

Id	Name	SBO
Q	Quarantined	

##### Kinetic Law

**Derived unit**  $(86400 \text{ s})^{-1} \cdot \text{kitem}$

$$v_4 = \text{kappa} \cdot I \quad (9)$$

#### 8.5 Reaction `quarantine_zombies`

This is an irreversible reaction of one reactant forming one product.

##### Reaction equation

##### Reactant

Table 14: Properties of each reactant.

Id	Name	SBO
Z	Zombie	

## Product

Table 15: Properties of each product.

Id	Name	SBO
Q	Quarantined	

## Kinetic Law

**Derived unit**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

$$v_5 = \text{sigma} \cdot Z \quad (11)$$

## 8.6 Reaction death\_quarantined

This is an irreversible reaction of one reactant forming one product.

## Reaction equation

## Reactant

Table 16: Properties of each reactant.

Id	Name	SBO
Q	Quarantined	

## Product

Table 17: Properties of each product.

Id	Name	SBO
R	Removed	

## Kinetic Law

**Derived unit**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

$$v_6 = \text{gamma} \cdot Q \quad (13)$$

### 8.7 Reaction `natural_death_infected`

This is an irreversible reaction of one reactant forming one product.

#### Reaction equation

#### Reactant

Table 18: Properties of each reactant.

Id	Name	SBO
I	Infected	

#### Product

Table 19: Properties of each product.

Id	Name	SBO
R	Removed	

#### Kinetic Law

**Derived unit**  $(86400 \text{ s})^{-1} \cdot \text{kitem}$

$$v_7 = \text{delta} \cdot I \quad (15)$$

### 8.8 Reaction `zombification_infected`

This is an irreversible reaction of one reactant forming one product.

#### Reaction equation

#### Reactant

Table 20: Properties of each reactant.

Id	Name	SBO
I	Infected	

## Product

Table 21: Properties of each product.

Id	Name	SBO
Z	Zombie	

## Kinetic Law

**Derived unit**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

$$v_8 = \text{rho} \cdot \text{I} \quad (17)$$

## 8.9 Reaction resurrection

This is an irreversible reaction of one reactant forming one product.

## Reaction equation

## Reactant

Table 22: Properties of each reactant.

Id	Name	SBO
R	Removed	

## Product

Table 23: Properties of each product.

Id	Name	SBO
Z	Zombie	

## Kinetic Law

**Derived unit**  $(86400\text{ s})^{-1} \cdot \text{kitem}$

$$v_9 = \text{zeta} \cdot \text{R} \quad (19)$$

## 8.10 Reaction destruction

This is an irreversible reaction of one reactant forming one product influenced by one modifier.

### Reaction equation

### Reactant

Table 24: Properties of each reactant.

Id	Name	SBO
Z	Zombie	

### Modifier

Table 25: Properties of each modifier.

Id	Name	SBO
S	Susceptible	

### Product

Table 26: Properties of each product.

Id	Name	SBO
R	Removed	

### Kinetic Law

**Derived unit**  $(86400 \text{ s})^{-1} \cdot \text{kitem}$

$$v_{10} = \text{alpha} \cdot S \cdot Z \quad (21)$$

## 9 Derived Rate Equations

When interpreted as an ordinary differential equation framework, this model implies the following set of equations for the rates of change of each species.

## 9.1 Species S

**Name** Susceptible

**Initial assignment** S

This species takes part in four reactions (as a reactant in `death_healthy`, `infection` and as a product in `birth` and as a modifier in `destruction`).

$$\frac{d}{dt}S = v_1 - v_2 - v_3 \quad (22)$$

## 9.2 Species I

**Name** Infected

**Initial concentration** 0 kitem · l<sup>-1</sup>

This species takes part in four reactions (as a reactant in `quarantine_infected`, `natural_death_infected`, `zombification_infected` and as a product in `infection`).

$$\frac{d}{dt}I = v_3 - v_4 - v_7 - v_8 \quad (23)$$

## 9.3 Species Z

**Name** Zombie

**Initial concentration** 0 kitem · l<sup>-1</sup>

This species takes part in five reactions (as a reactant in `quarantine_zombies`, `destruction` and as a product in `zombification_infected`, `resurrection` and as a modifier in `infection`).

$$\frac{d}{dt}Z = v_8 + v_9 - v_5 - v_{10} \quad (24)$$

## 9.4 Species R

**Name** Removed

**Initial concentration** 0 kitem · l<sup>-1</sup>

This species takes part in five reactions (as a reactant in `resurrection` and as a product in `death_healthy`, `death_quarantined`, `natural_death_infected`, `destruction`).

$$\frac{d}{dt}R = v_2 + v_6 + v_7 + v_{10} - v_9 \quad (25)$$

## 9.5 Species Q

**Name** Quarantined

**Initial concentration** 0 kitem · l<sup>-1</sup>

This species takes part in three reactions (as a reactant in [death\\_quarantined](#) and as a product in [quarantine\\_infected](#), [quarantine\\_zombies](#)).

$$\frac{d}{dt}Q = v_4 + v_5 - v_6 \quad (26)$$
